“Salvestrols and CYP1B1 – a Natural Team Combating Cancer Naturally”
by Emeritus Professor Dan Burke also quoted as saying “Way beyond antioxidants !”

Case Studies

Published in *Journal of Orthomolecular Medicine*

Assembled and vetted by Professor Gerry Potter and Dr Brian A. Schaefer (non med)

Vol.22, No. 4, 2007

Lung
Melanoma
Prostate
Breast
Bladder

Vol.25, No.1, 2010

Breast Stage 3
Liver Stage 2
Colon
Prostate
Prostate Gleason 6
Hodgkinson's Stage 3B

Vol. 27, No. 3 2012

Breast Stage 1
Squamous cell carcinoma / anus
Chronic Lymphocytic Leukaemia
Benign Prostatic Hyperplasia
Primary Peritoneal Carcinoma Stage 3 a further nine testimonials are available (not published)

Patients consented to their cases being reported in detail. Apply for further details
Access online “Professor Dan Burke on salvestrols - an interview with OrthoKennis”
Dr Jeffry Dachs has a blog detailing the case studies in collaboration with Professor Gerry Potter.

Notes: CYP1B1 is found in 98% of carcinomas University of Aberdeen 1997
and not found in healthy normal cells excepting Indonesian / Asian glaucoma cells

M D Anderson Institute (USA) reported that CYP1B1 was found in 81%
of Glioblastoma multiforme (brain) cells.

Professor Gerry Potter, Director of Cancer Drug Discovery Group,
De Montfort University, reports that salvestrols cross the blood brain barrier.
He discovered and brought Arbiraterone (prostate therapy) to NICE approval 2016.

Importantly: salvestrol nutritional therapy is for life thus preventing CYP1B1 restructuring healthy
cells into becoming “breweries” allowing unwanted mitosis and then metastasis
