Read "Cancer Dynamics" and "Delivery from Cancer" pdf's

cancerphytotherapy@gmail.com

October 2017

Cancer Phytotherapy with **phytoalexins** is complimentary supporting all **NHS** adopted therapies.

It has to be stated at this point that there is no cure for cancer because it is a naturally occurring condition 24/7/365 dividing every 30 minutes or so. The body is merely responding to unwanted, environmental, chemical and genetic factors leading to DNA mutation introducing pre-cancer cells.

Lack of diffused oxygen at the onset of mutation induced by a cancer stem cell stresses the cell and the normal routine activity is interrupted. The cell becomes slightly acidic and the regular cell death cycle slows down. This normal apoptosis is interrupted and the cells pile up rapidly. The situation deteriorates and by now the cancer cell is well established. This process begins mainly at mid-life when our immune system becomes less efficient. Carcinogens are all around us as airborne hydrocarbons such as benzpyrene (stationary car exhausts), diesel exhausts, chemicals at work and in our homes. This pollution triggers uncontrollable mutation. **But a prophylactic solution is now with us.**

Control and click Professor Danny Burke <http://www.youtube.com/watch?v=XzuHbmhTYWQHE>
He explains the "lock and key" mechanism revealing the way the dastard enzyme CYP1B1 arrives signalled by the mutated DNA which re-arranges the cell structure from being useful producer of energy and hormones into becoming a "brewery". He develops with the fantastic solution. Yes, ... simple **phytoalexins** from the colouring molecules in fruit. These are eaten benefitting all cells by supporting our overall metabolism. When this protective fruit compound is introduced to CYP1B1 it is converted into a useful and destructive tool. CYP1B1 is thus a simple catalyst. It is only found in cancer cells and strangely in Asian glaucoma cells. Scientific papers are available upon request.

Cancer cells with thickened walls (x 13) and disabled mitochondria (the factories), just fall apart !!! This action includes those cells that escape causing metastasis; these are just chased and caught ! Danny expresses this essential work as "beyond the work of antioxidants". **BCJ** 2002:86 pps774-8

To learn about how the body develops this condition we call pre-cancer, download the booklets, **"The Isterol Programme"** 11 pp, **"Cancer Dynamics"** and **"Delivery from Cancer"** 78 pp or order the A4 wire bound version for educational distribution, copyright free, £25 postage incl.
EXTRA !!

"The Isterol Programme" focusses besides cancer, on **Chronic Inflammation**, just read the list! and **Renal Impairment**.

These conditions are ameliorated with the addition of Vitamin D3 (25mcg/day) to the phytoalexins. A remarkable substance is produced, discovered at the University of Texas (1997), called **KLOTHO**. **Bonus:** increased longevity and discomfort cum pain relief. Reduction of side effects in cancer too.

We look forward to your request. The Department of Health and Public Health England along with the Royal College of General Practitioners, have expressed much interest in the work. Our role is to provide GP-support and assistance when patients indicate a wish to explore this alternative route.

We support the "Choosing Wisely UK" campaign headed by Academy of Medical Royal Colleges.

Summary: “Klotho is a regulator of oxidative stress and senescence”, quoting Prof Makoto Kumo-o, University of Texas, Korean Journal of Medicine, 2011 issue 26(2), who discovered and named KLOTHO.

Twenty five anecdotal cancer reports are available with patient-approval. Printing + p&p will be requested. There are many references but the above will lead to exploration and a better understanding of the great work that has been and is continuing at universities and medical schools since Makoto’s discovery.

Disclaimer *The Isterol Programme* does not attempt to prescribe any course of treatment, cure or prevention. Everyone is urged to contact their healthcare provider in the event of any medical condition requiring treatment or giving concern. Then revert. Since 2002 over 650 referrals have been made by healthcare providers when the patient chose to elect the natural route. This has come about through patients experiencing failed drugs and chemotherapy along with unpleasant side effects and dare we say it, fearful of a shorter life span

The Academy of (40) Medical Royal Colleges, London, recognises our endeavour and now are promoting this essential work. Our role is to educate the medical professions and encourage hard working doctors and oncologists to assist their patients with this useful adjunct to their work. We welcome patient-referrals to the Isterol Programme. As said metastasis is the Achilles Heel to all current cancer therapies which we have shown can now be restricted. Failed remissions say after many years can be controlled.

Phytotherapy Service’s The Isterol Programme ©

is administered by **The ResQ Club**, Salters, Hastings, UK, TN34 3HD

(PS and RC have had **no** financial assistance, nor any commercial, academic association or connection.)
